

Macroscopic forms

1. *Expansive type* (ca. 18%)
 - solitary coarse-nodular
 - multiple coarse-nodular
2. *Infiltrative type* (ca. 33%)
 - diffuse infiltrative (ca. 5%)
3. *Combination type* (ca. 42%)

Microscopic forms

1. Trabecular type
2. Pseudoglandular type
3. Scirrhus type
4. Solid type
5. Fibrolamellar type
6. Spindle-cell type

Degree of tumour differentiation

1. High differentiation
2. Moderate differentiation
3. Low differentiation
4. No differentiation (anaplastic type)

Cytologic differentiation

- | | |
|----------------|-------------------|
| 1. Polygonal | 3. Clear-cellular |
| 2. Pleomorphic | 4. Small-cellular |
