

## Corrections for Global Chemical Kinetics of Fossil Fuels by Alan K. Burnham

Chapter 1, page 8. The term Eurasia is used here in the context of the BP Statistical Review, which does not include the Middle East or Asia Pacific in that classification. Consequently, these statements apply to Europe plus the Former Soviet Union.

Chapter 5, Section 5.3. The references starting with [54] are one or two low due to the addition of references without renumbering. On page 167, the phrase “the kinetic models for this regime” should be followed by [52-54]. Reference [59] is redundant to reference [18], and all references starting with [58] and above should be incremented by two. For example, the principal activation energy of 53 kcal/mol and the parameters in Table 5.2 come from reference [60].

Chapter 7, page 310. The process is “Rubble In Situ Extraction (RISE)”.
